

INFLUENZA: What You Need to Know

When Flu season hits, speed is key to preventing a single case from becoming a full blown outbreak.

► **How can I get it?**

Flu viruses travel through the air in droplets when someone with the infection coughs, sneezes or talks. You can inhale the droplets directly, or you can pick up the germs from an object – such as a telephone or computer keyboard – and then transfer them to your eyes, nose or mouth

► **How can I prevent Influenza?**

Getting a flu shot every year can help you stay healthy. A flu shot contains the flu vaccine, which could keep you from getting the flu.

A flu shot won't keep everyone healthy. But, getting the flu shot every year can mean that if you do get the flu, you might have only a mild case.

► **What are the symptoms?**

- Fever or feeling feverish/chills
- Cough
- Sore throat
- Runny or stuffy nose
- Muscle or body aches
- Headaches
- Fatigue (tiredness)
- Some people may have vomiting and diarrhea, though this is more common in children than adults
